Maximal cubic coupling in 3+1 QFT

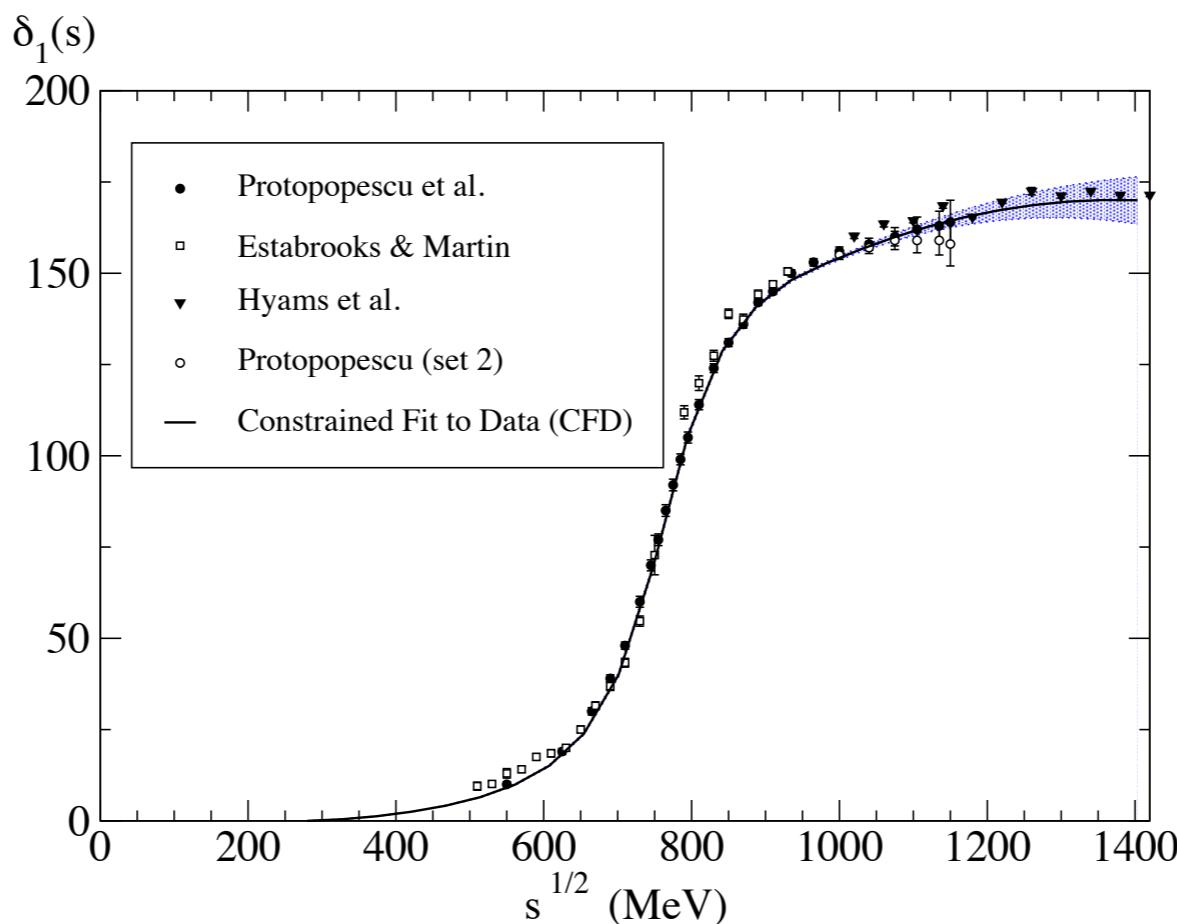

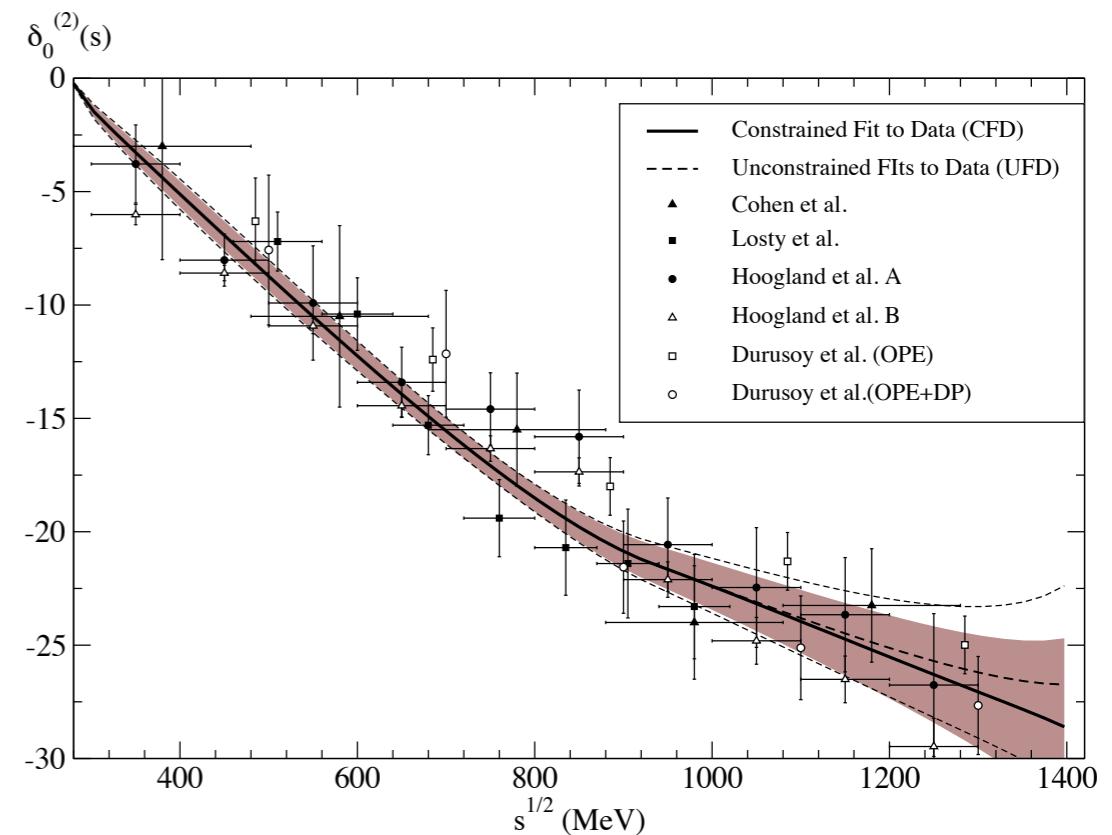

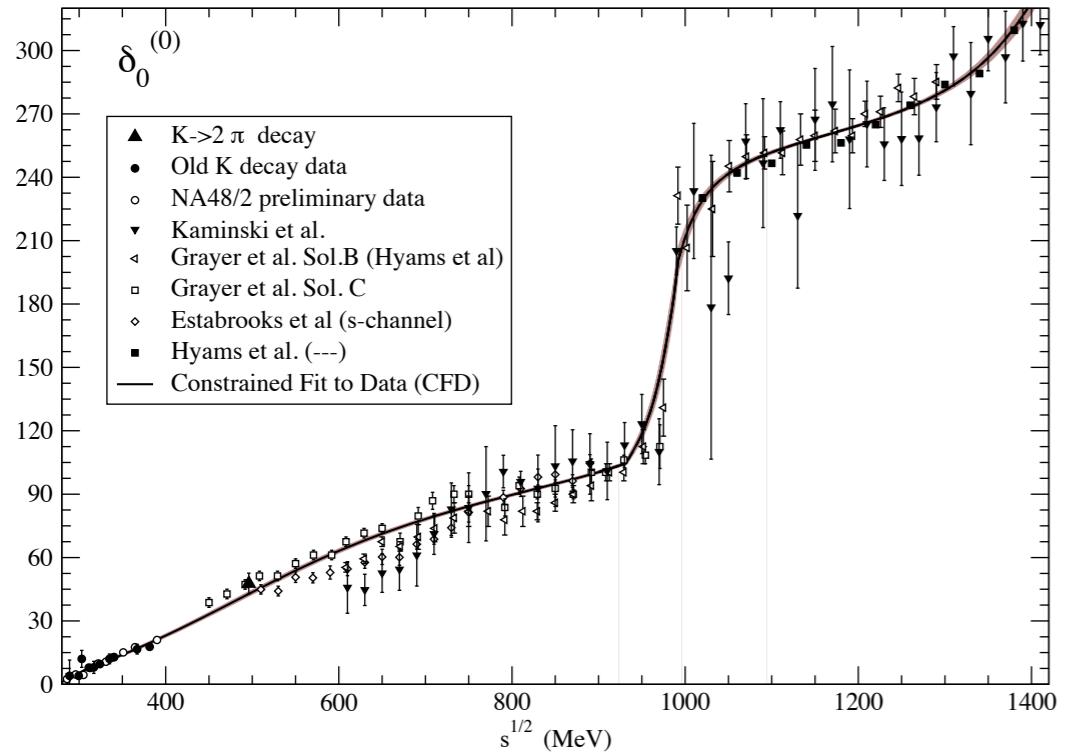

Bounds on scattering lengths

Pion Scattering

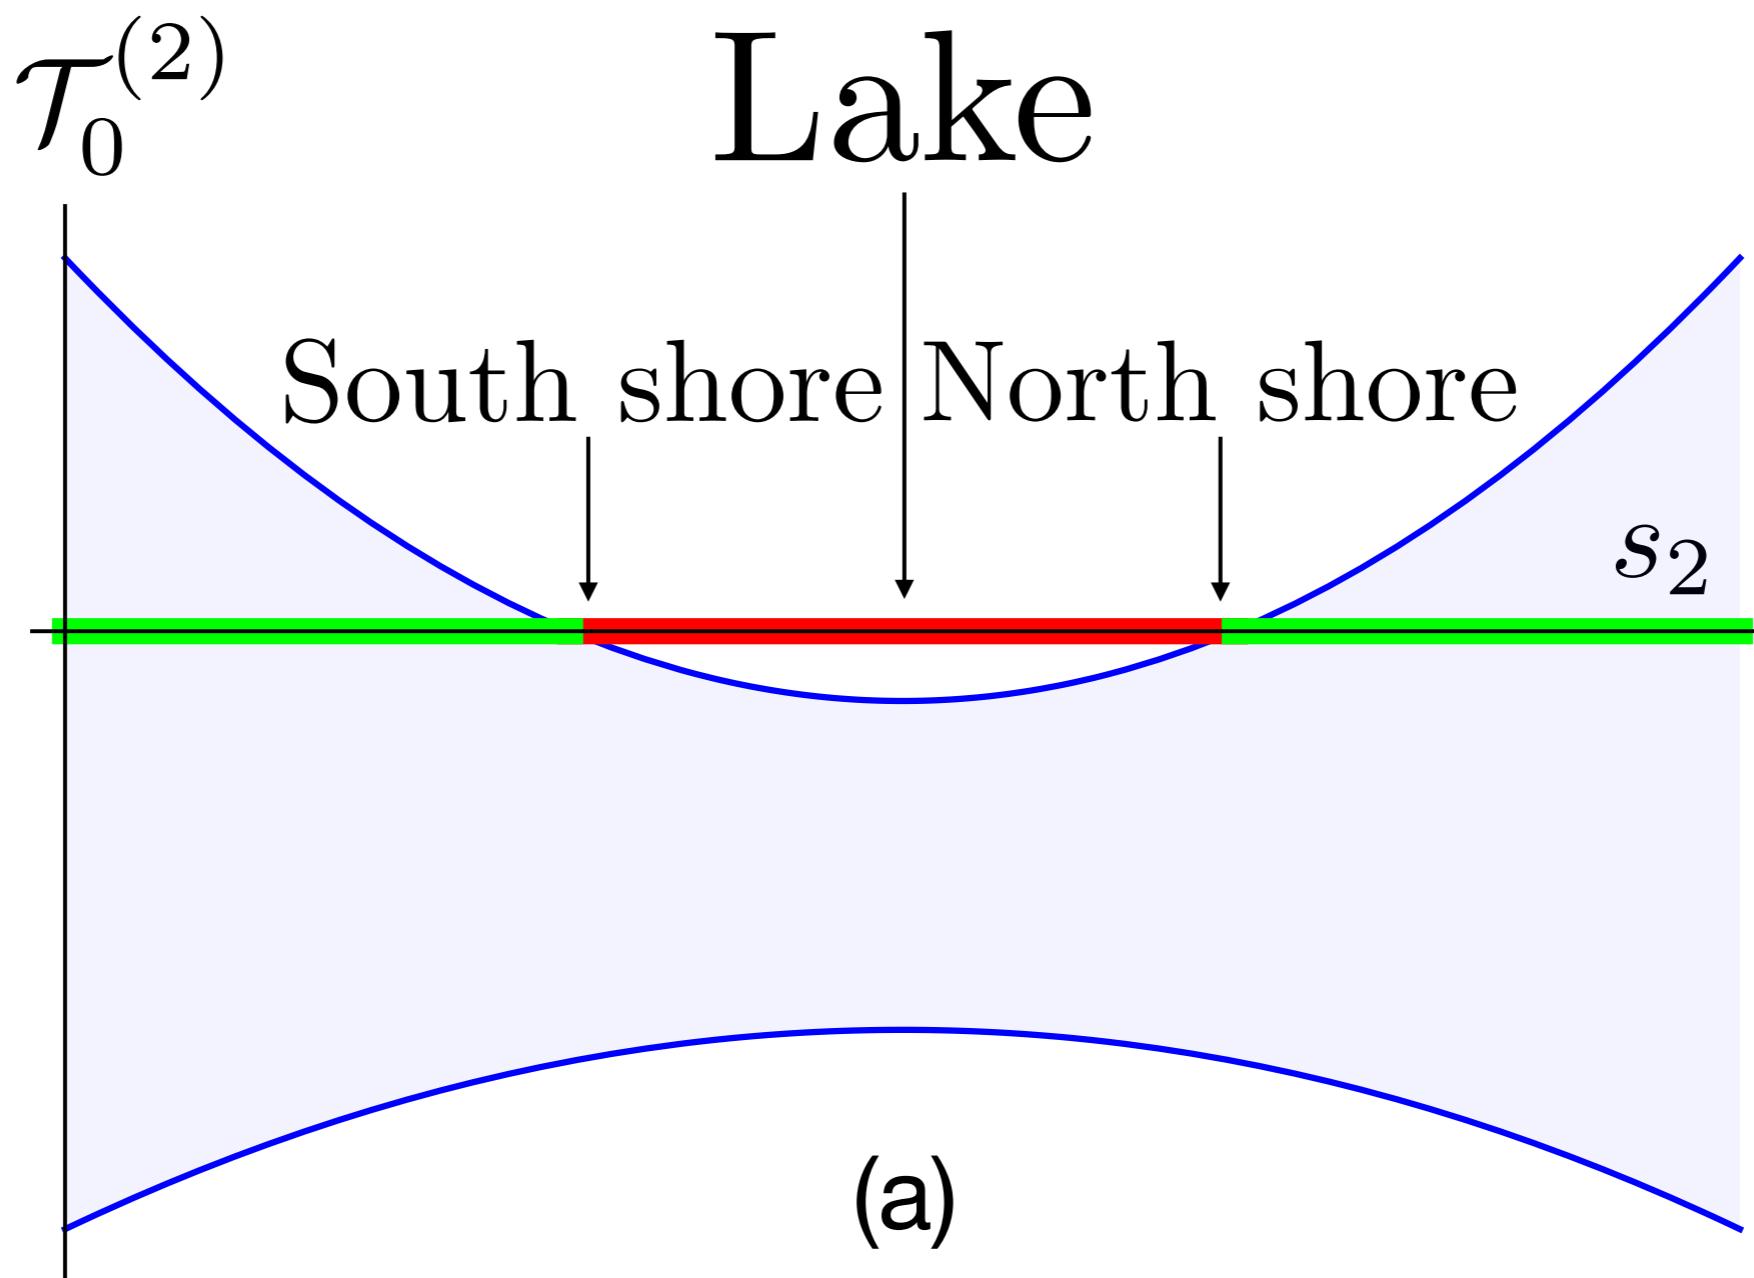

Experimental phase shifts

[Pelaez et al. 08]

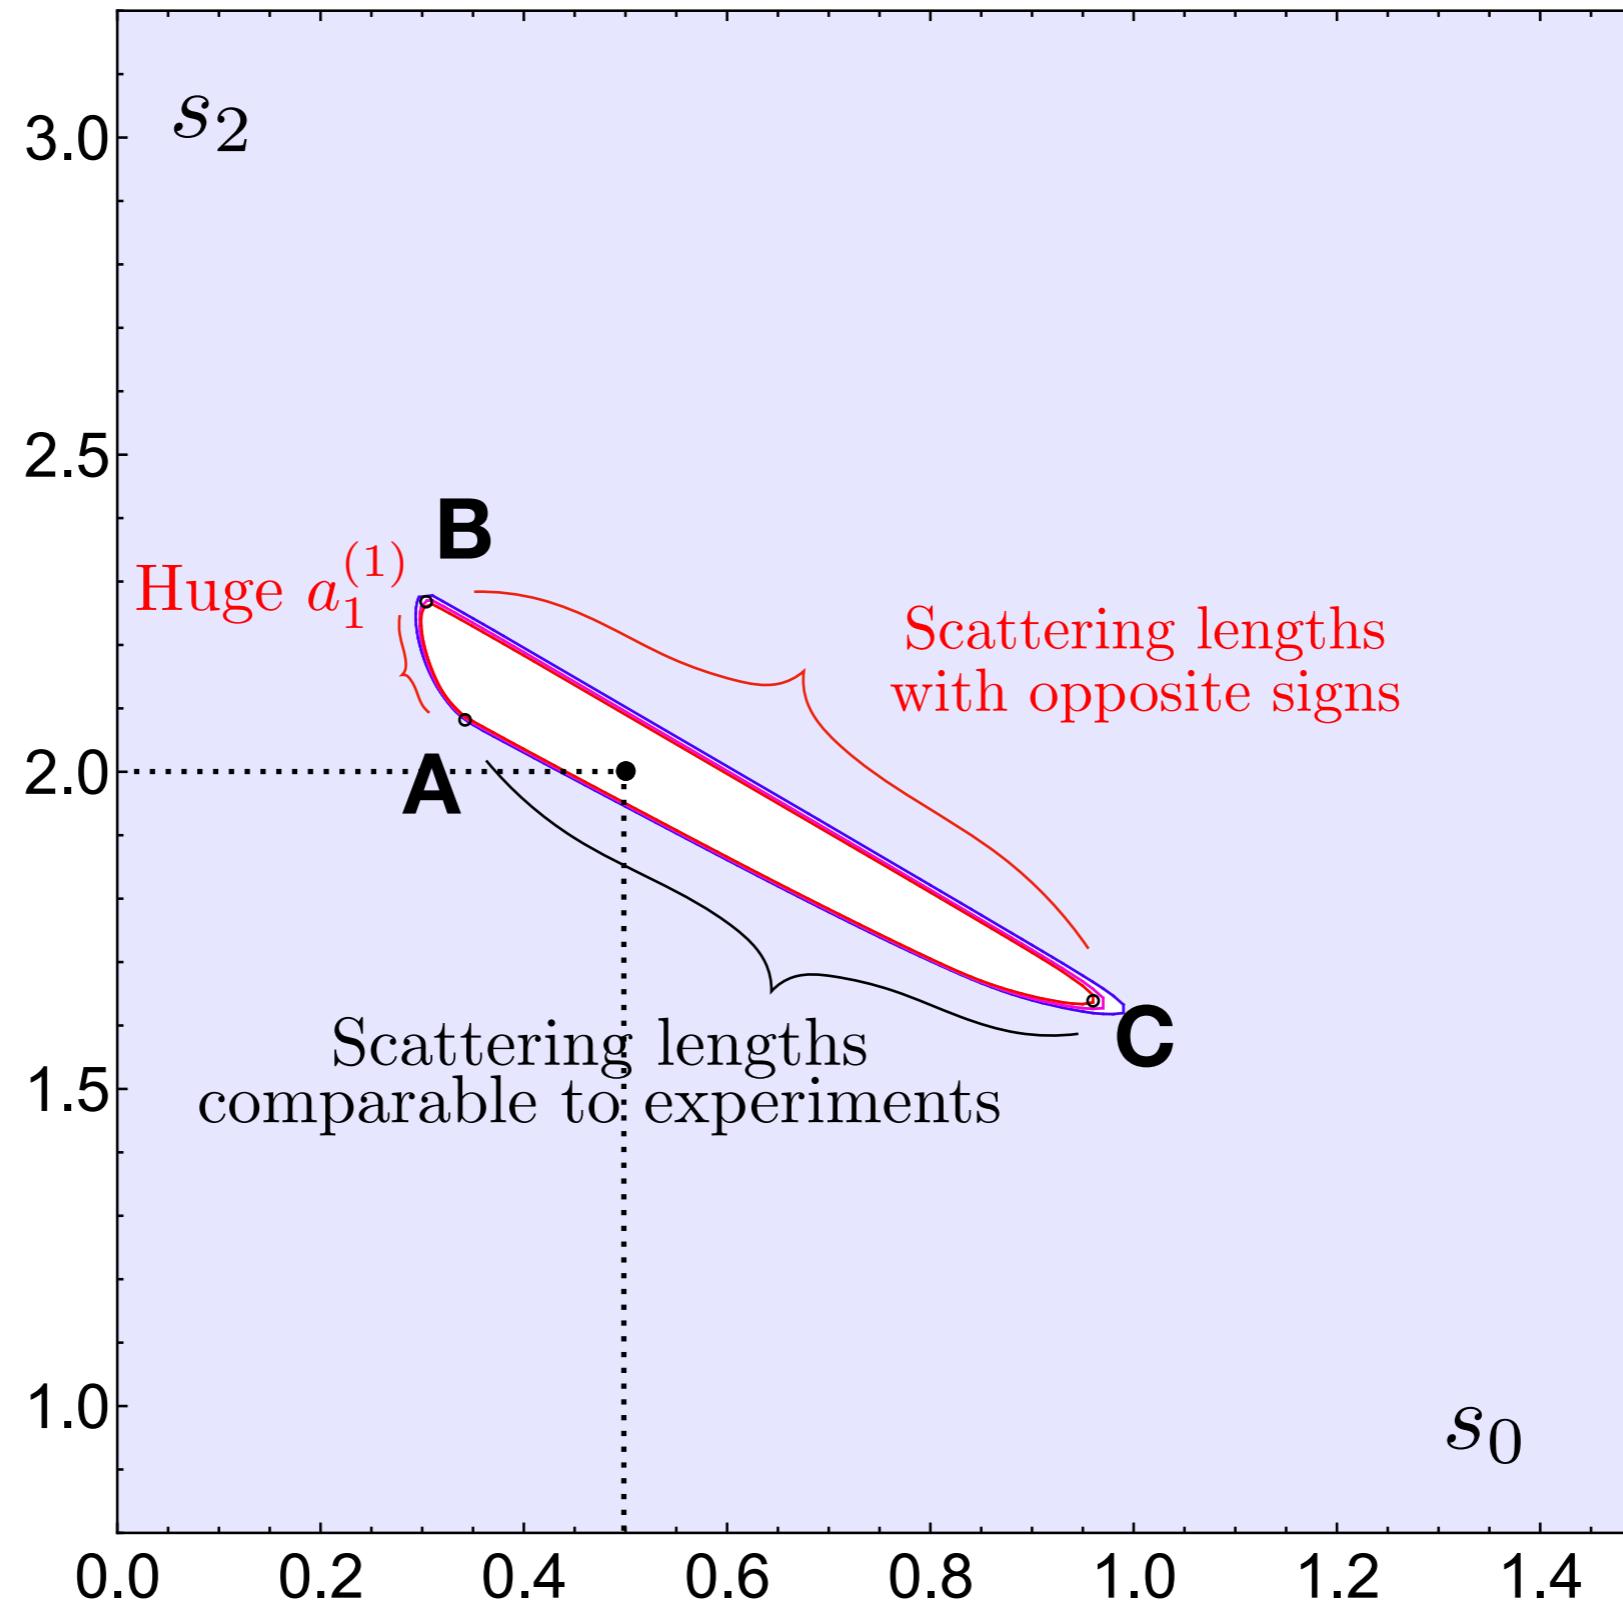

The Lake

Max-Min $\mathcal{T}_0^{(2)}$

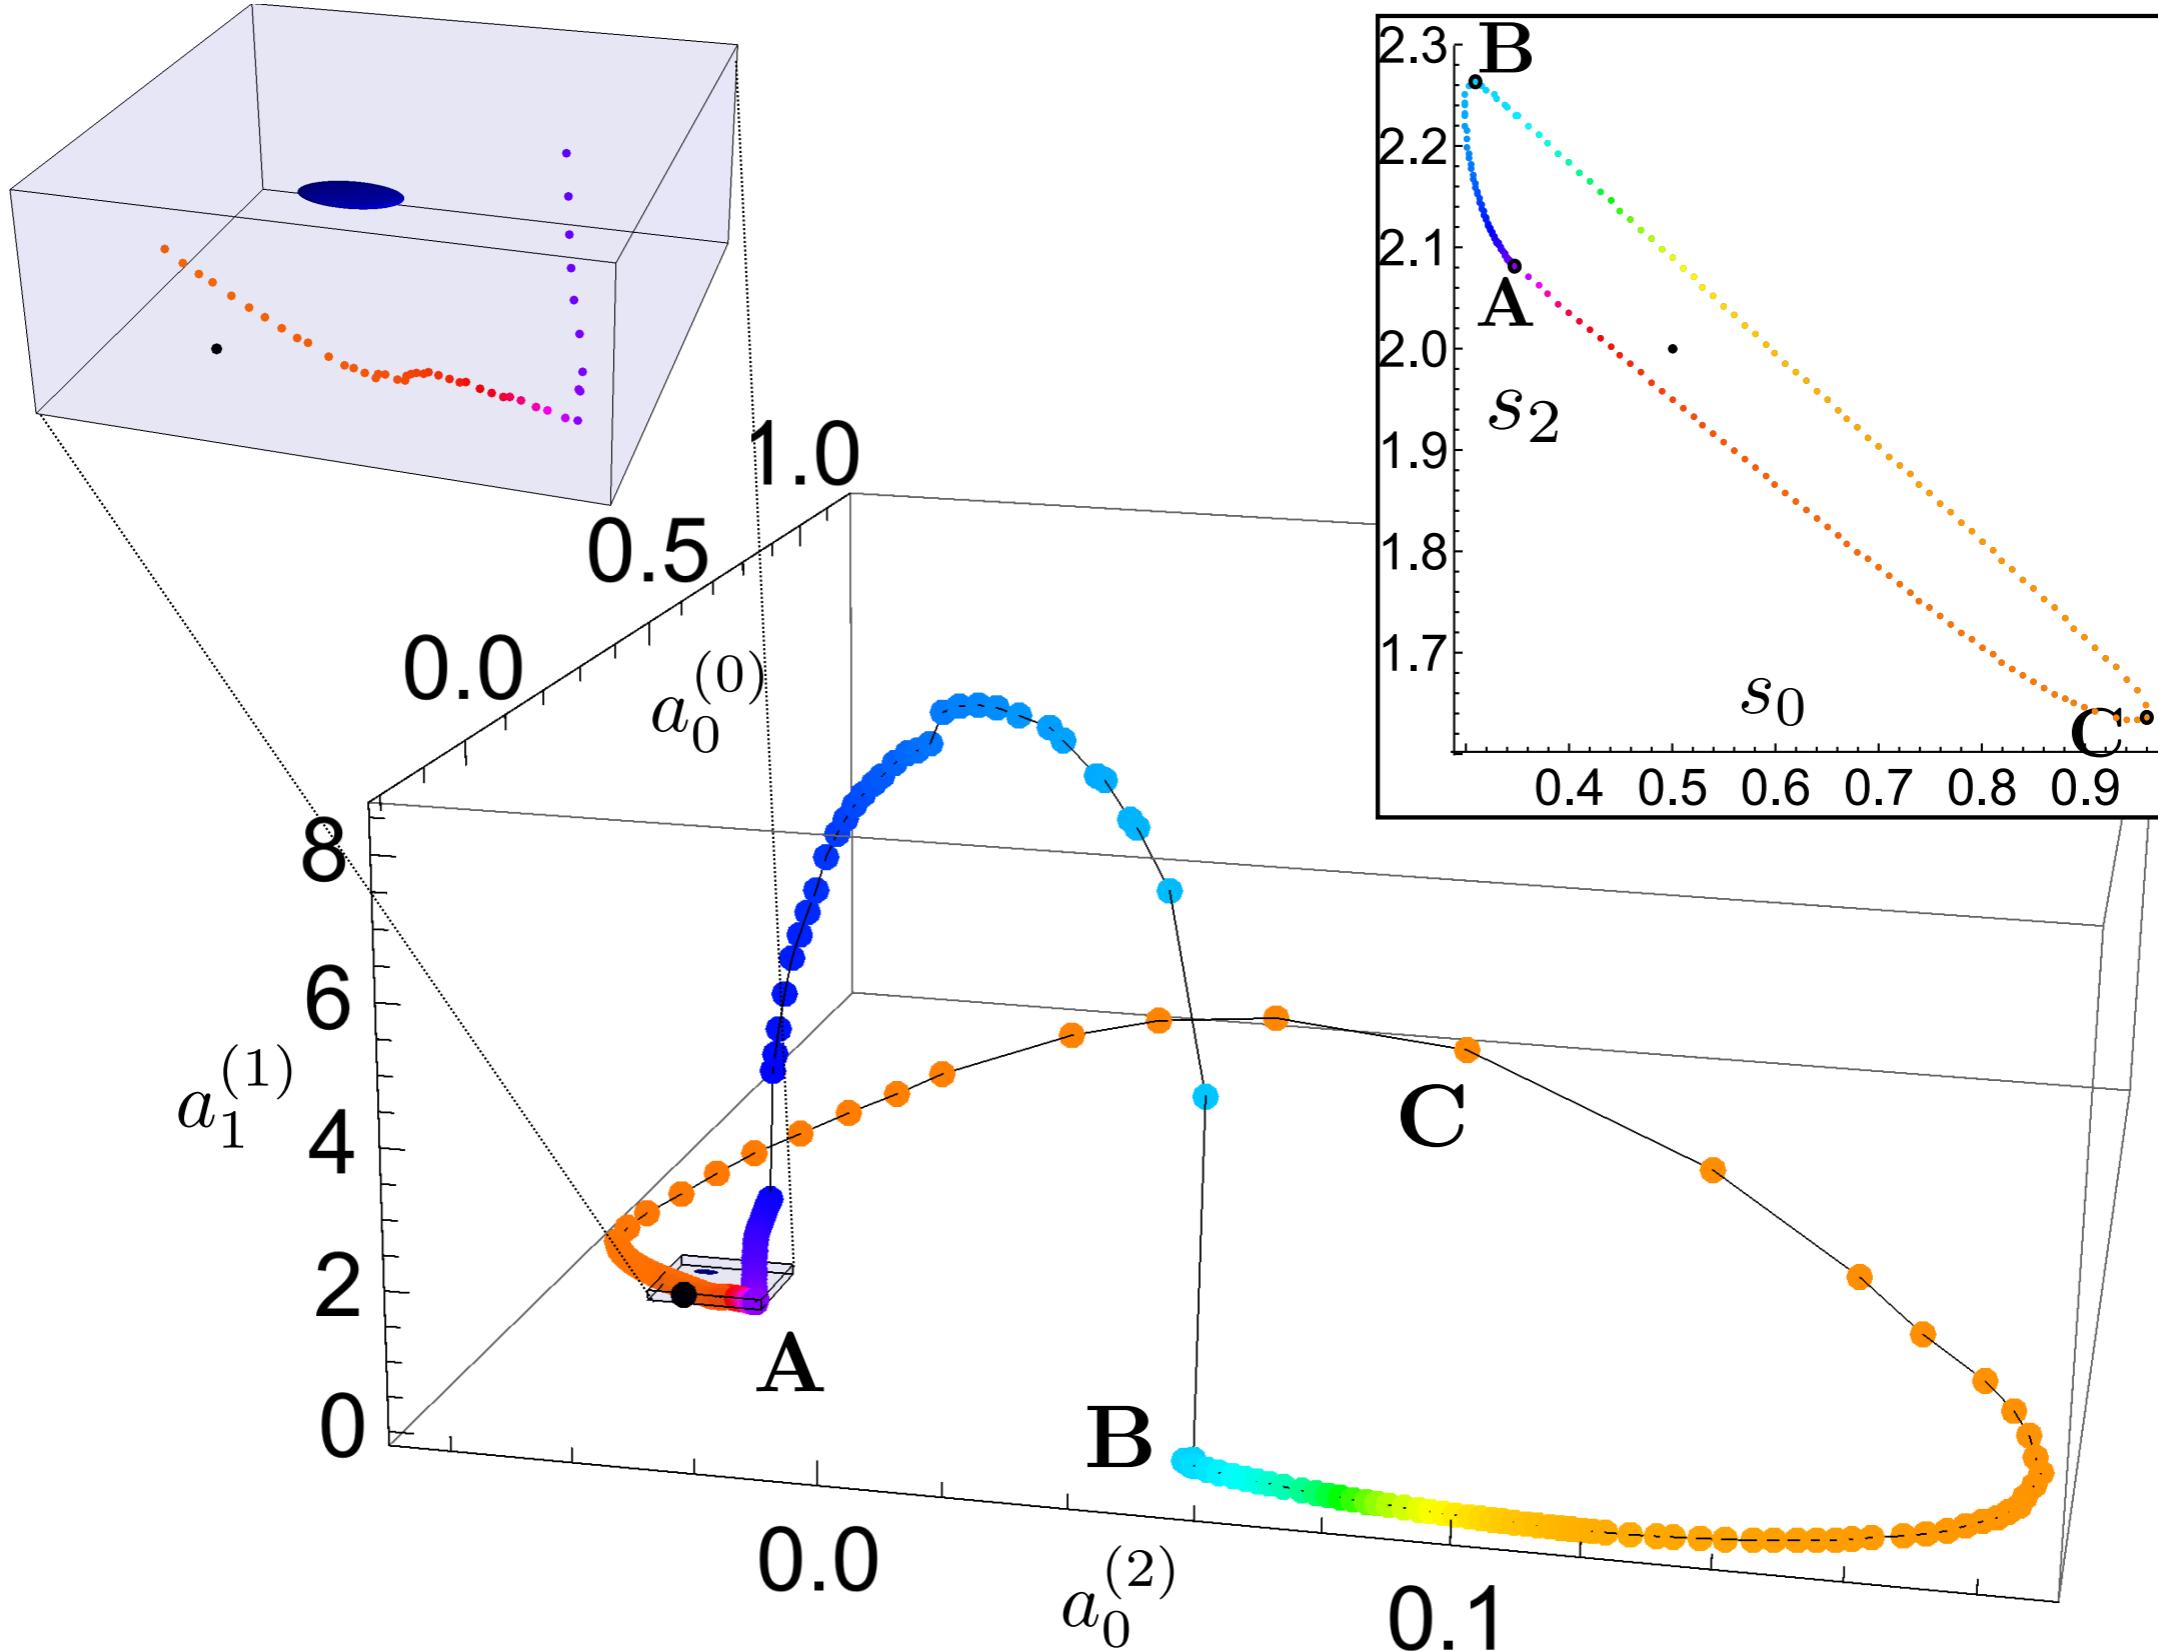

Impose: $S_1^{(1)}(m_\rho^2) = 0$ $m_\rho \simeq (5.5 + 0.5 i)$

The Lake

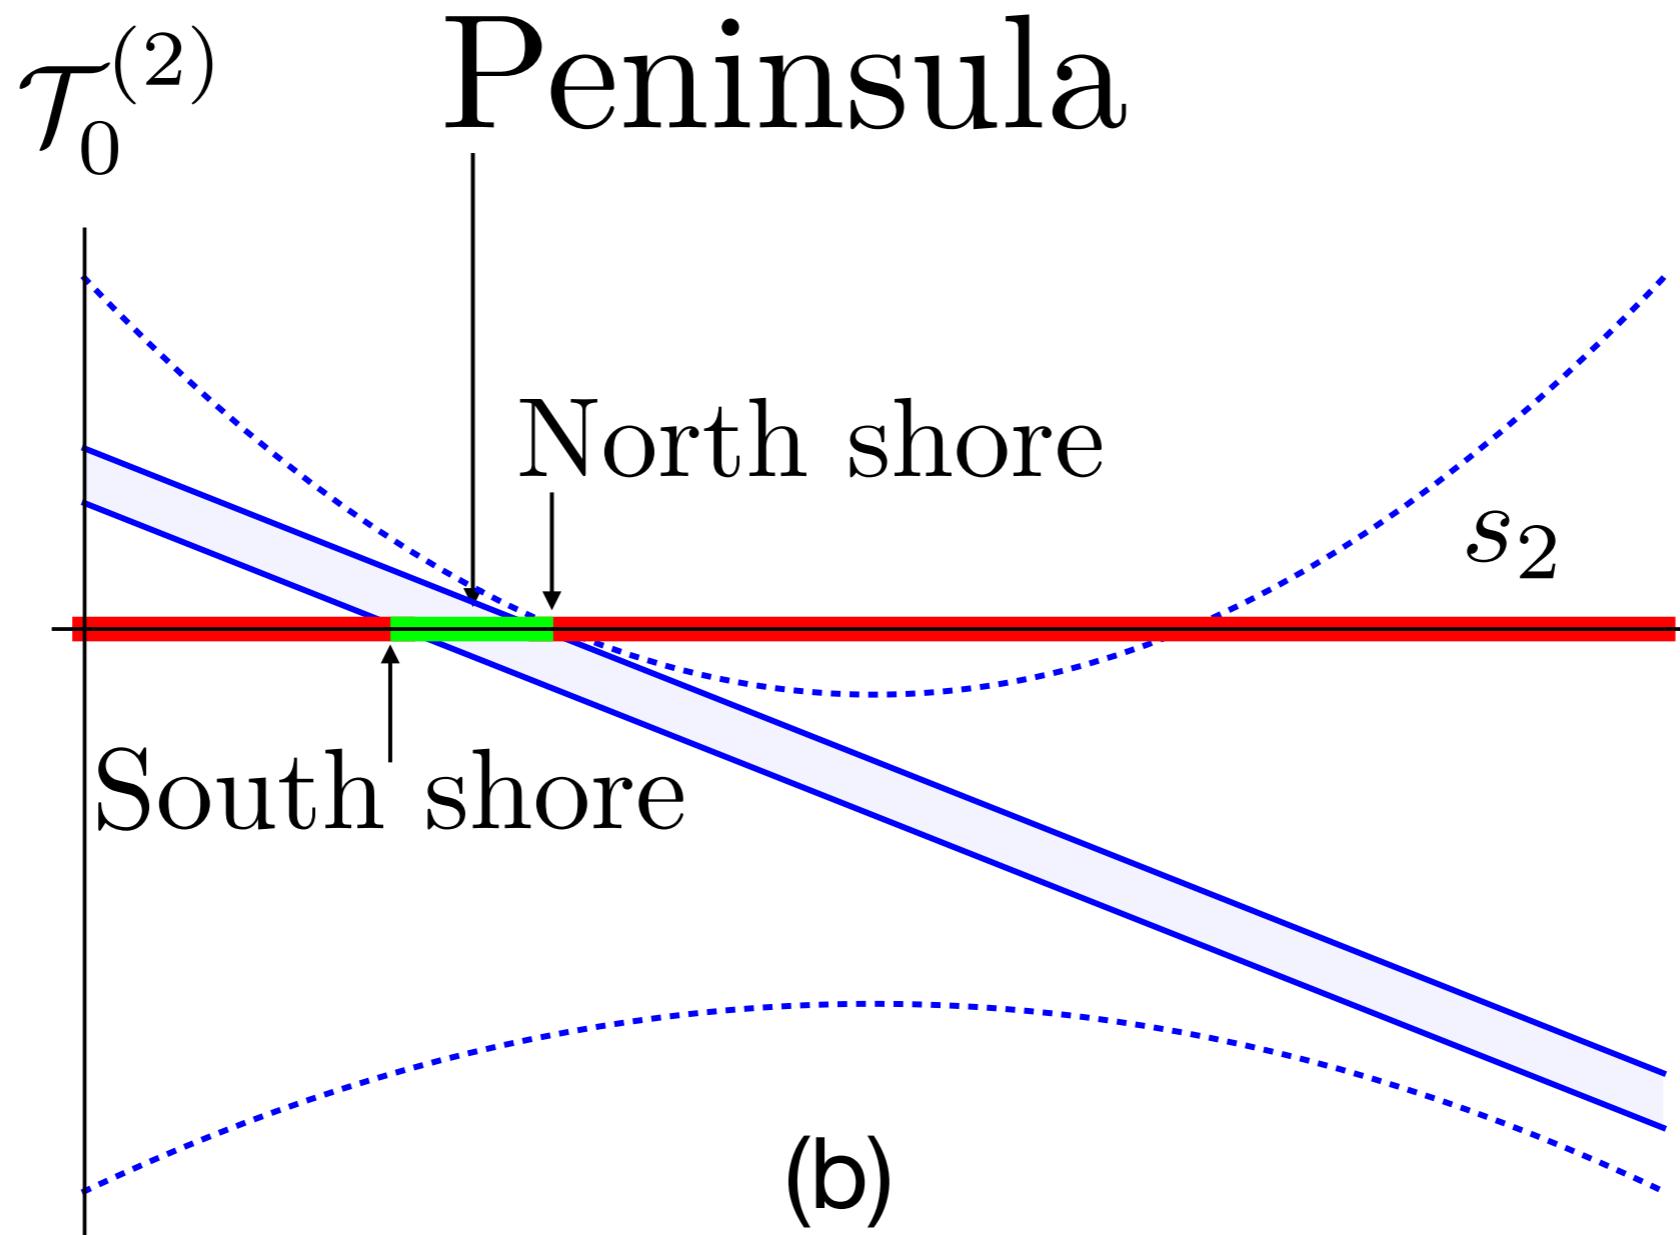

Scattering lengths around the Lake

The Peninsula

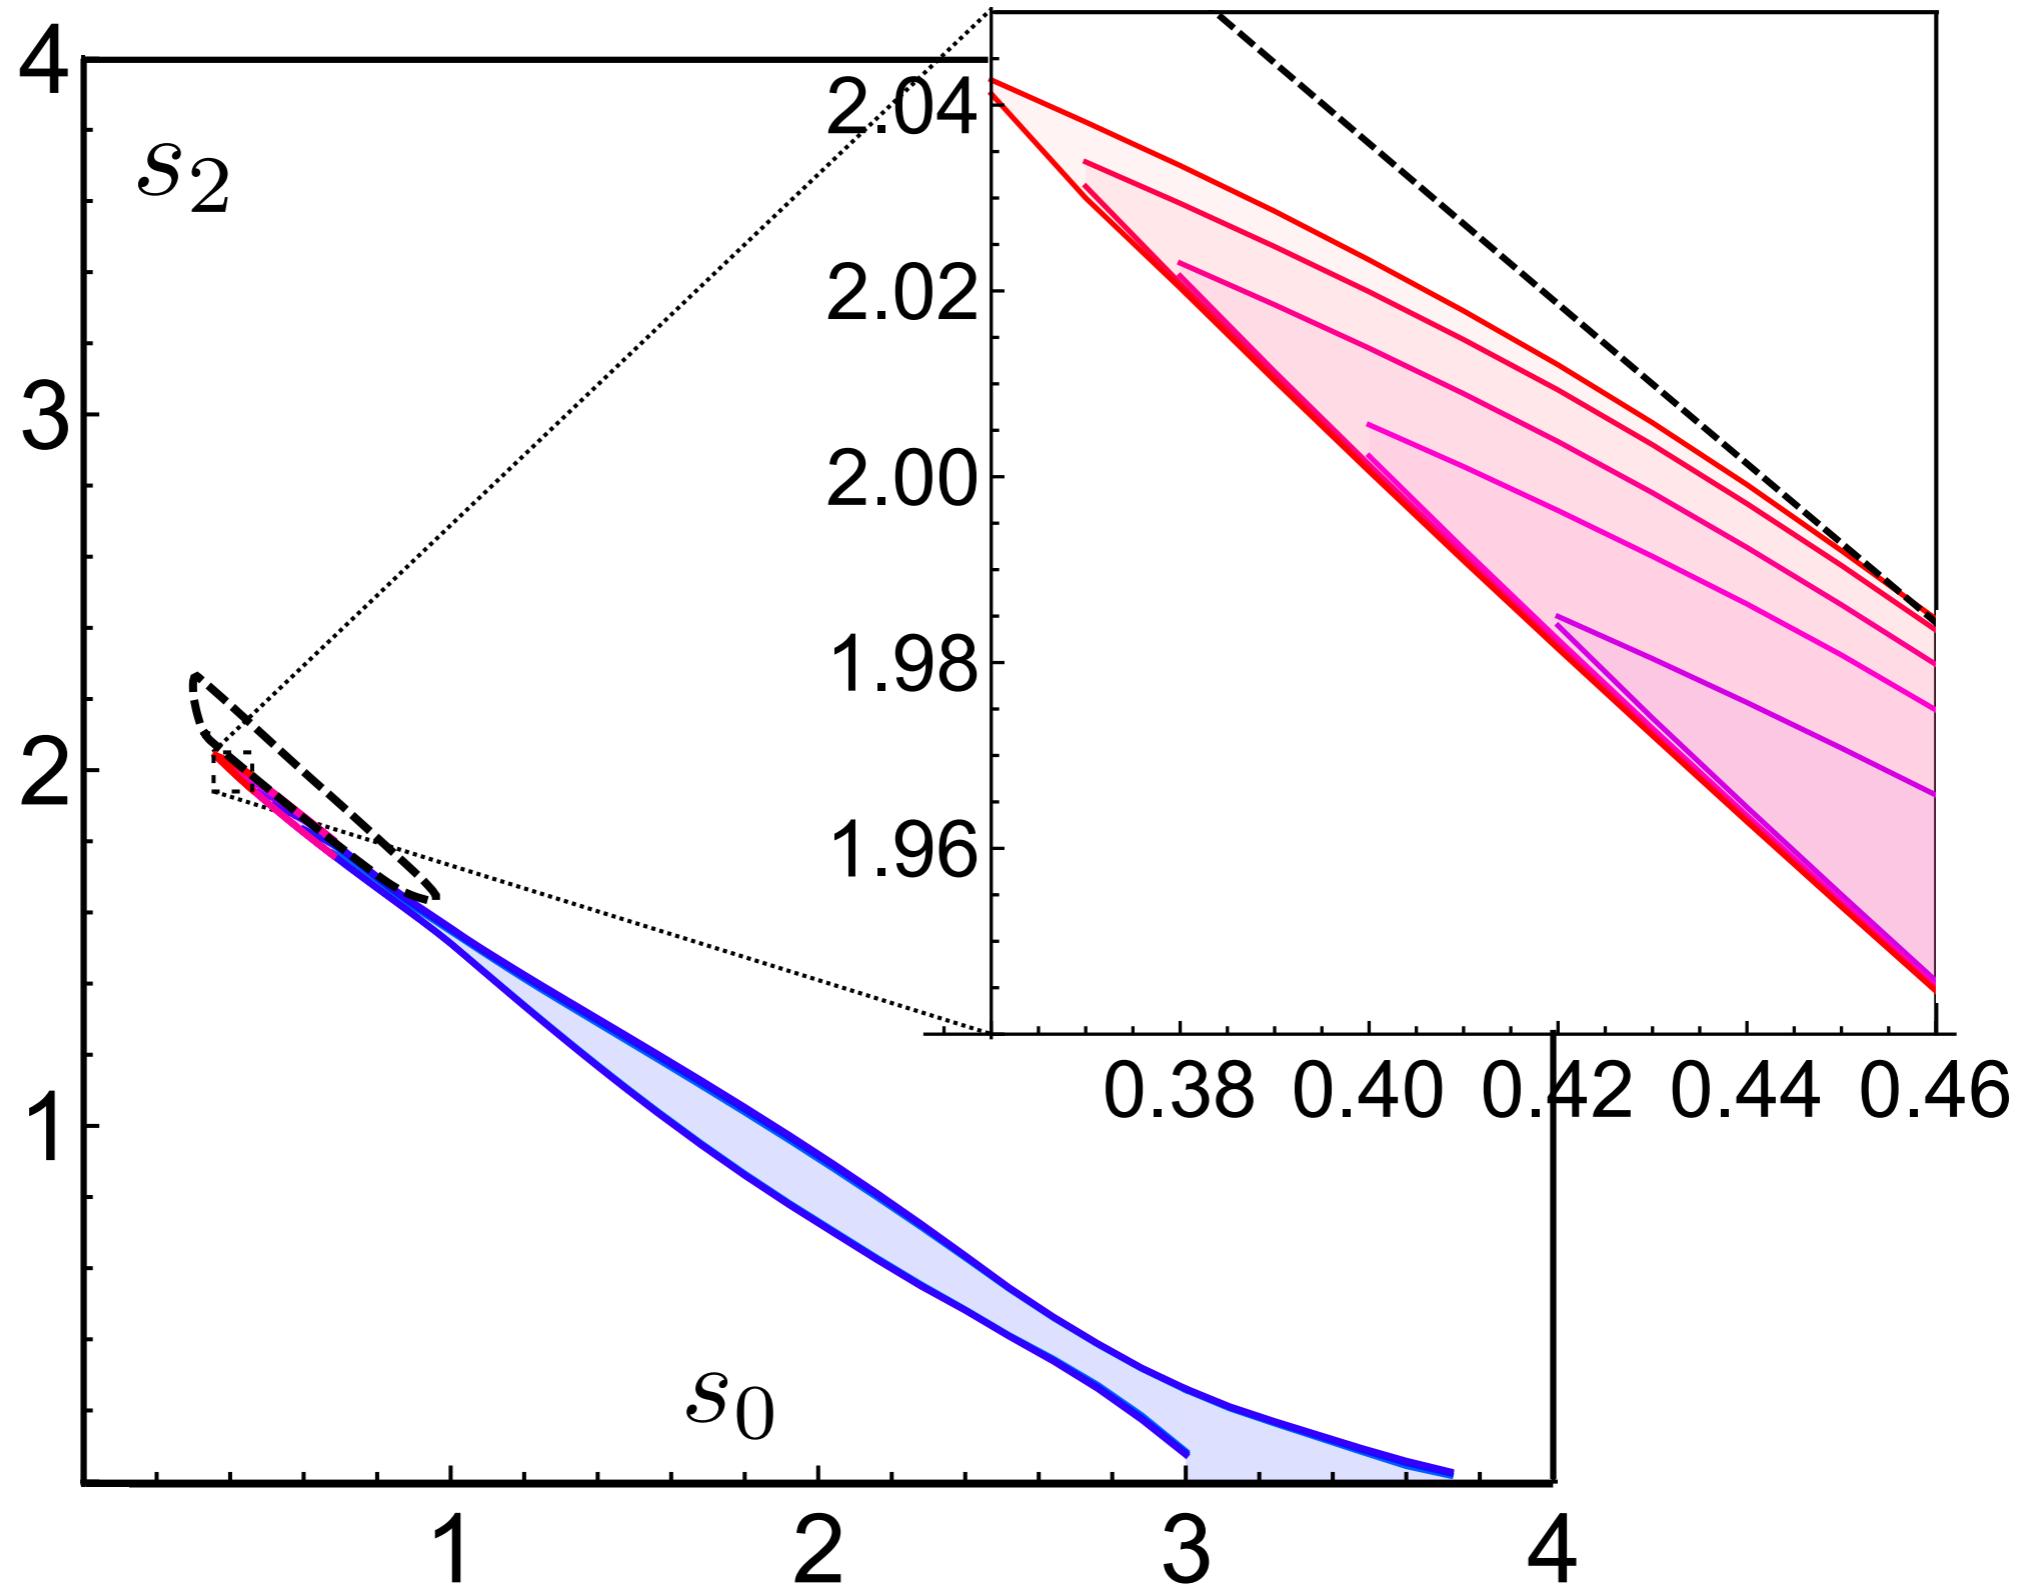

Max-Min $\mathcal{T}_0^{(2)}$

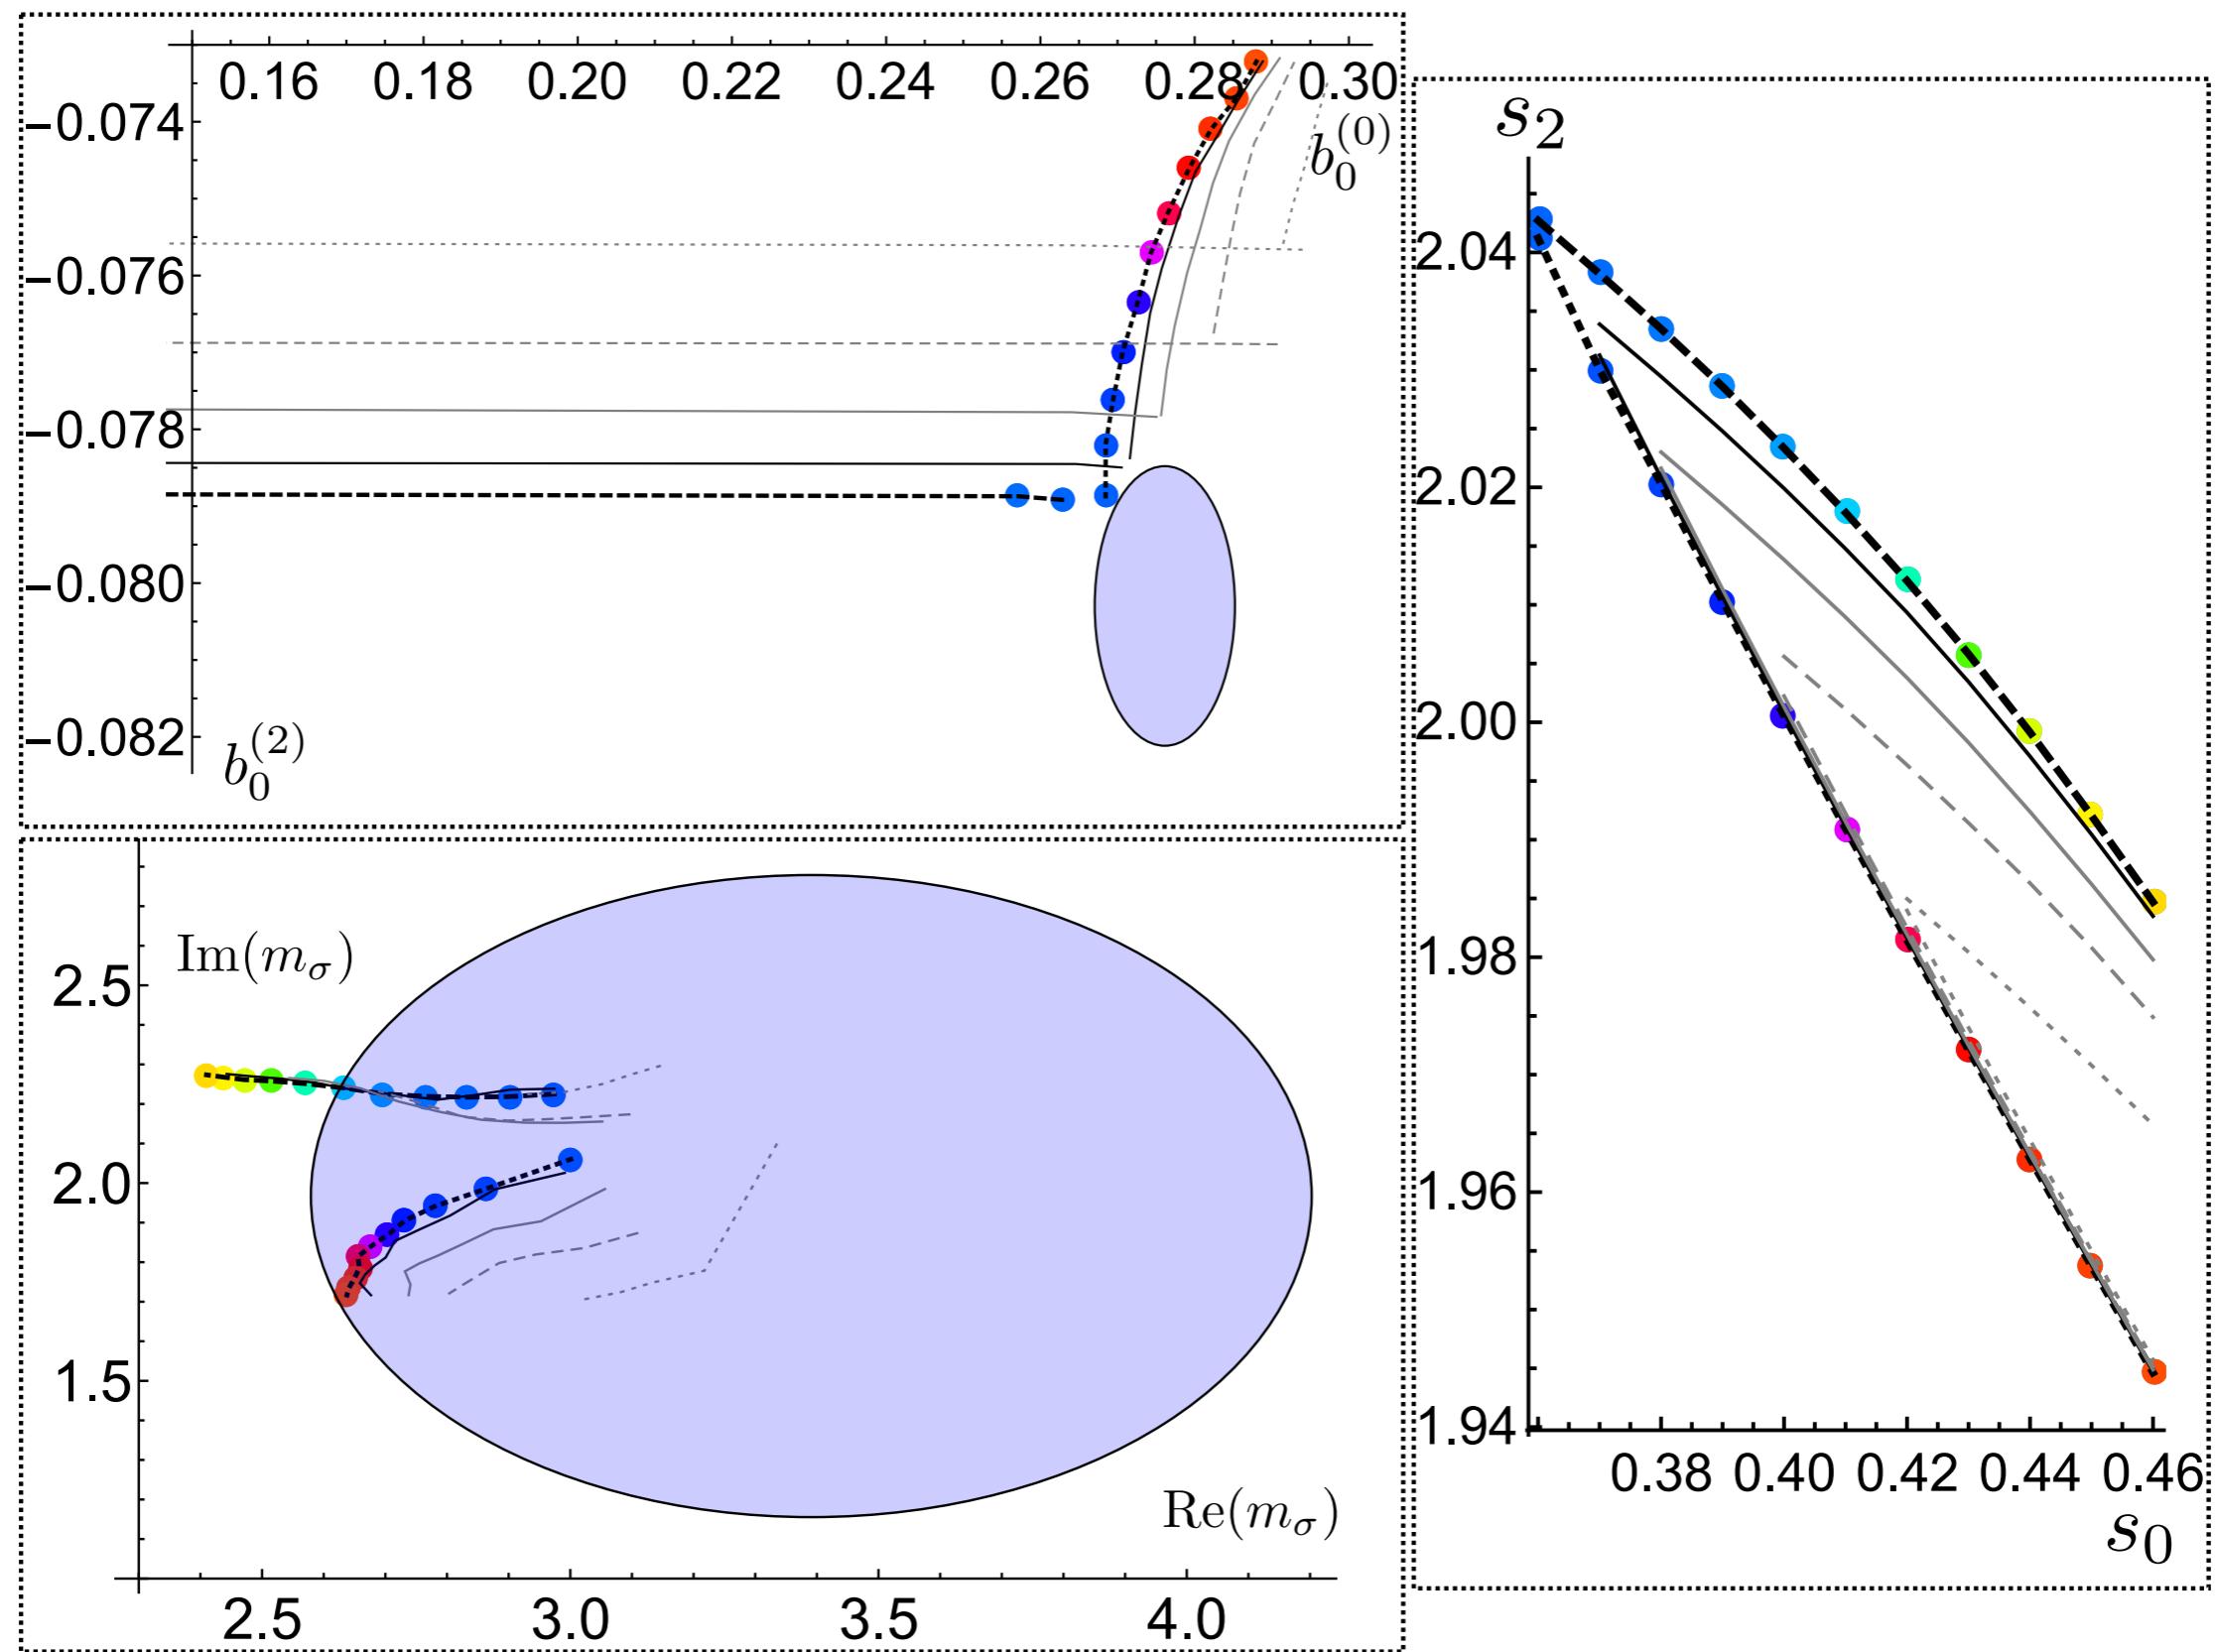

Impose: $S_1^{(1)}(m_\rho^2) = 0$ $m_\rho \simeq (5.5 + 0.5 i)$

$$\left| a_0^{(0)} - 0.2196 \right| < 0.0034, \quad \left| a_1^{(1)} - 0.038 \right| < 0.002, \quad \left| a_0^{(2)} + 0.0444 \right| < 0.0012$$

The Peninsula

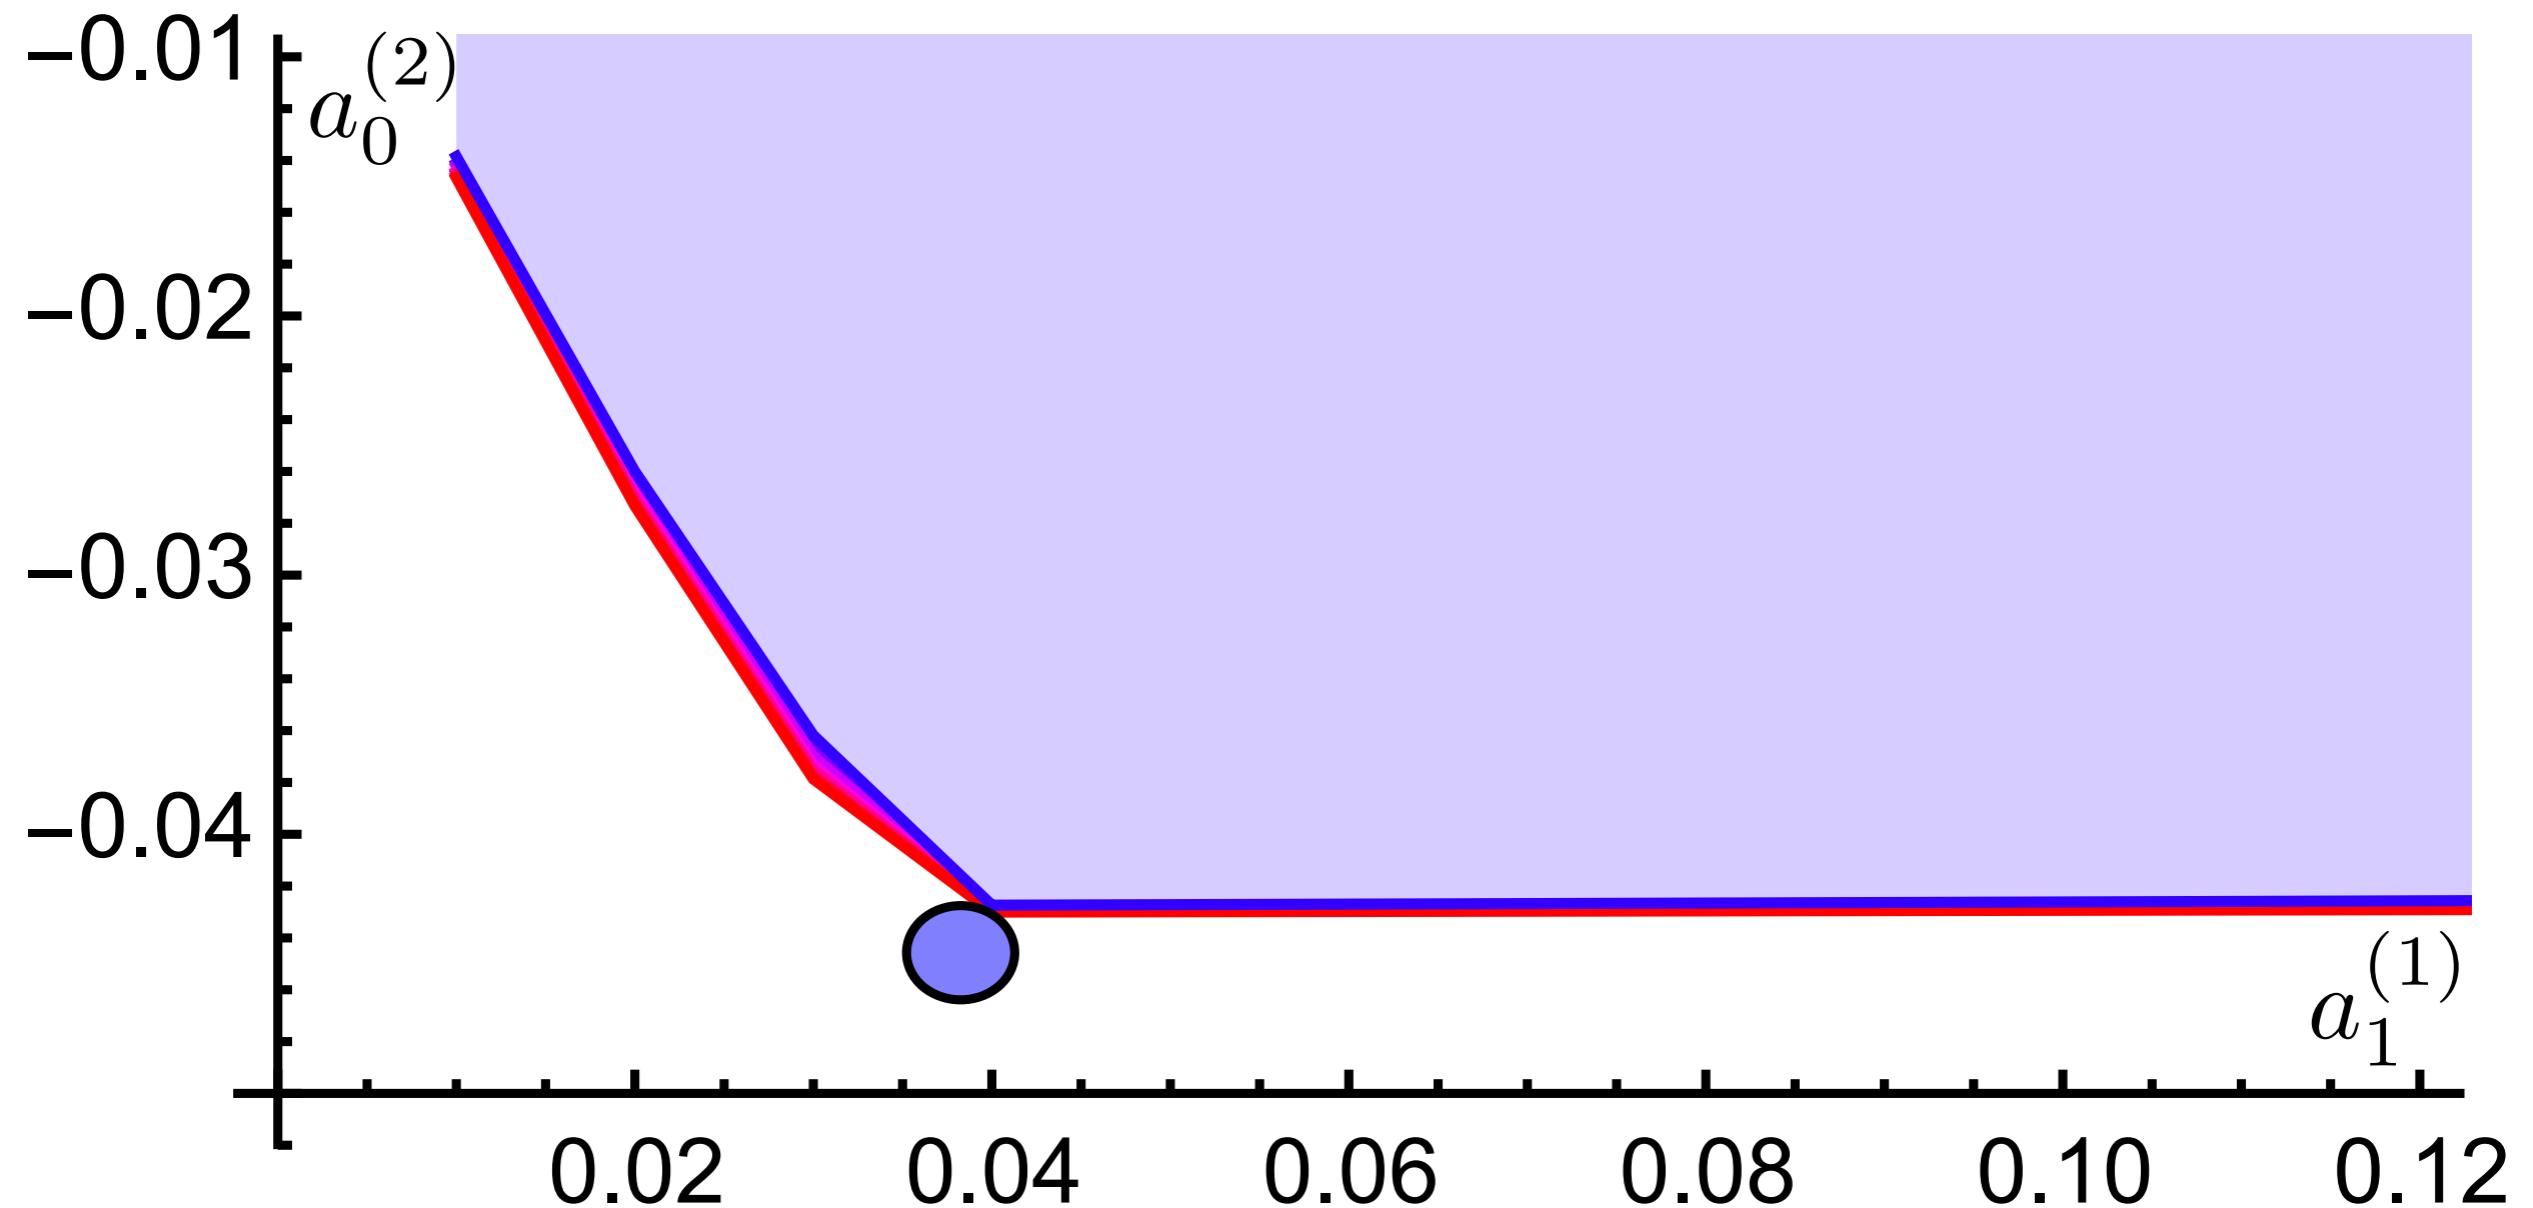

Physics at the cape

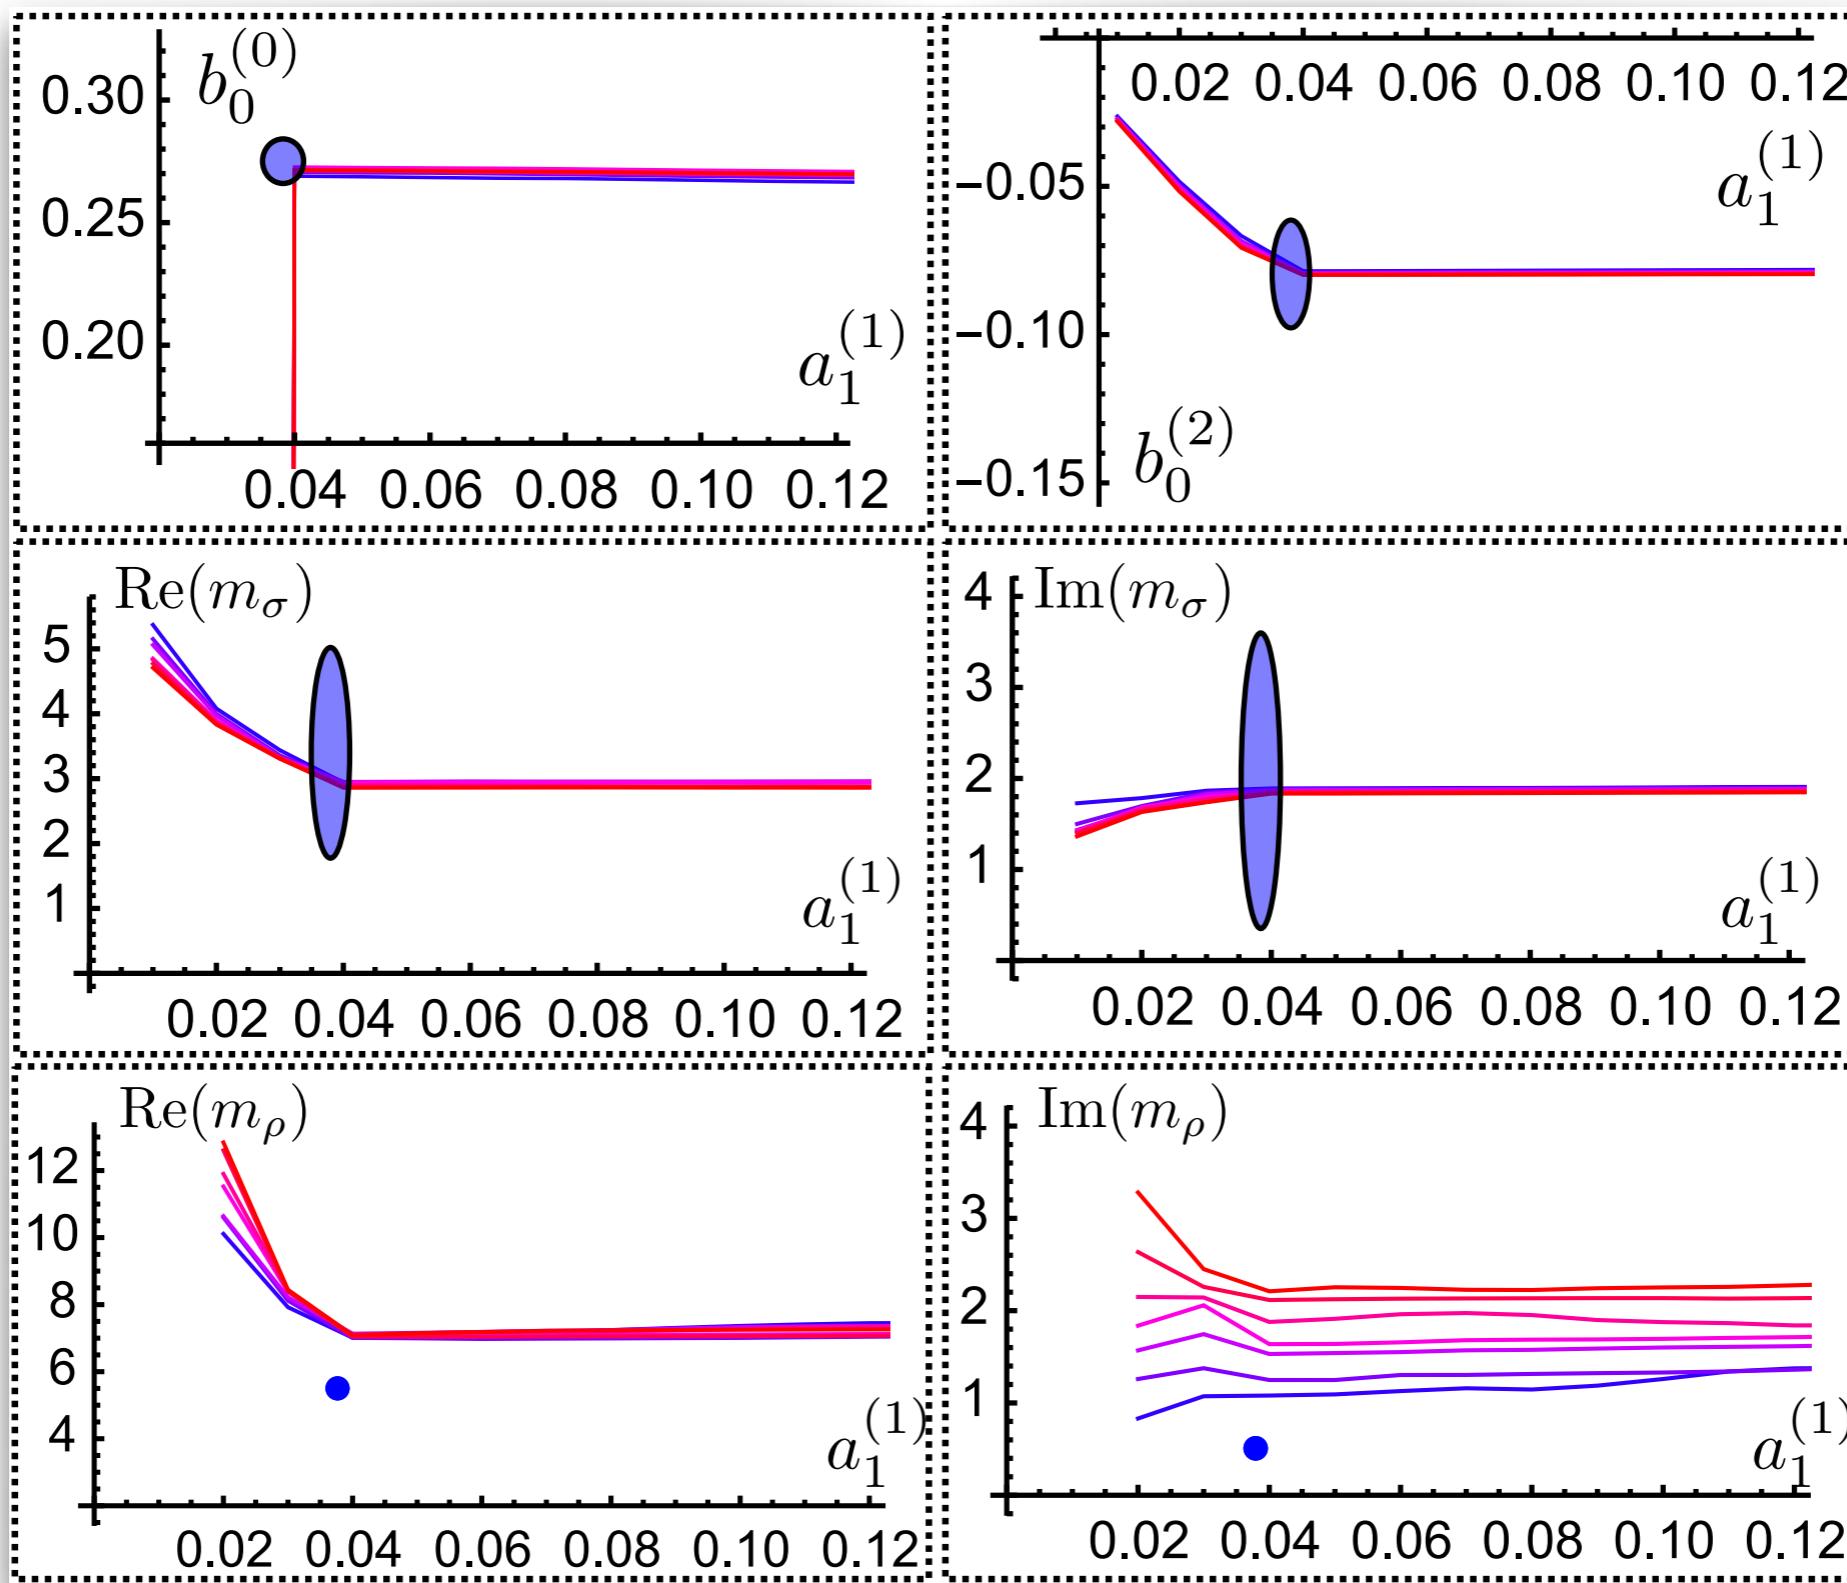

The Kink

The Kink

Impose: $s_0 = 0.36,$ $s_2 = 2.04,$ $a_0^{(0)} = 0.2196$

Physics at the Kink

Outlook I

- Detailed study of **phase shifts** of extremal solution and resonance content
- Comparison with **lattice** data for heavier pions
- Bootstrap study of **massless** pions
- Use our analytic and crossing symmetric ansatz to **fit** the experimental data subject to the unitarity constraints

Outlook II

- Bootstrapping multiple amplitudes
[I+ID in progress with Homrich, Toledo, van Rees, Vieira]
- Anomalous thresholds (Landau diagrams)
- Particles with spin (internal and external)
- Massless particles (QCD flux tube)
- Connect with conformal bootstrap for $D>2$
- Other interesting questions? Maximize particle production?
- Can we input UV data about the QFT? Hard scattering?
Form factors?

Thank you!
